

2014-2015 Trapper Information

Maine Department of Inland Fisheries and Wildlife

Caring for Maine's Outdoor Future

PAUL R. LEPAGE
GOVERNOR

STATE OF MAINE
DEPARTMENT OF
INLAND FISHERIES & WILDLIFE
284 STATE STREET
41 STATE HOUSE STATION
AUGUSTA ME 04333-0041

CHANDLER E. WOODCOCK
COMMISSIONER

September 24, 2014

Dear Trapper:

It is a tradition that each year the Commissioner of IFW sends out a letter to Maine's trappers to inform them of changes to trapping regulations, alert them to special concerns, and to wish them luck in the upcoming trapping season. I am sure you will be glad to hear that the Department is proposing considerably fewer regulatory changes this year than last year. I would like to call your attention to one of those changes. Last year, we made an error in describing the Wildlife Management Districts (WMD) that were open for the early muskrat season. Instead of opening WMD 9 for the early muskrat season, some of our regulatory information stated that WMD 9 was closed and WMD 8 was open. This year, we are proposing to correct last year's error and open WMD 9 for early muskrat trapping and let muskrat trapping in WMD 8 revert to the regular trapping season schedule.

Many of you have likely heard that our furbearer biologist, John DePue, took a job with the Michigan Department of Natural Resources to be closer to family. John will be missed; he did a great job for IFW and Maine trappers. We are working to fill his position as soon as possible, and are confident that we will be able to find another high caliber biologist to be Maine's furbearer biologist.

I would like to remind everyone to please complete the trapper effort reporting forms included with this letter. Trapping effort information is used to monitor trends in furbearer populations, and can be used to describe Maine's trapping program. The information provided in these trapper effort forms was crucial in developing Maine's incidental take plan for lynx. We appreciate your participation in this effort.

Please remember that if you trap a lynx you must report the catch to a Department Warden or Wildlife Biologist as soon as possible. You must report the catch prior to removing the lynx from the trap, unless there is a good chance that the lynx would be injured by the time you could get a message to a Department official. If you must release a lynx, you will need to report the event to the Department within 24 hours from the time the lynx was discovered. If you catch a lynx, please call the lynx hotline (207) 592-4734, or contact your local Warden.

As usual, fur must be tagged within 10 days of the end of the season for that particular species. All bobcats taken by hunting must be tagged within 72 hours. Only Department personnel can tag otter and bobcat. Telephone numbers for Department offices can be found on page 2 of the 2014-2015 Hunting & Trapping Laws and Rules summary booklet.

PHONE: (207) 287-5202

FISH AND WILDLIFE ON THE WEB:
www.maine.gov/ifw

EMAIL ADDRESS:
ifw.webmaster@maine.gov

Once again, the Department will be distributing the Trapper Information Booklet over the internet rather than mailing copies to every trapper. We are asking trappers who have access to the Internet to obtain their copy of the Trapper Information Booklet from the Department's webpage at http://www.maine.gov/ifw/hunting_trapping/trapping/index.htm . If you do not have access to the Internet, please telephone the Wildlife Division at 287-5252 to request a printed copy.

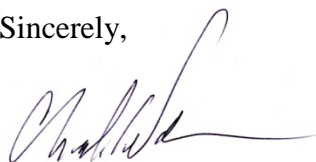

Trapping season dates for the 2014-2015 trapping season:

- General trapping season November 2 - December 31
- Early fox and coyote trapping season October 19 - November 1
- Early muskrat season in WMDs 1-6, and 9-11 October 26 - November 1
- Fisher season in WMDs 12, 13, & 15-29 November 15 - December 15
- Fisher season in WMDs 1-11, & 14 November 2 - December 31

WMDs	2014-2015 Beaver Trapping Seasons	Season Dates
1, 2, 4, 5		October 19 – April 30
3, 6, 8, 9, 10, 11.....		November 2 – April 30
18, 19, 28.....		November 2 – April 15
7, 12, 13, 14, 17, 27.....		November 2 – March 31
15, 16, 20, 21, 22, 23, 24, 25, 26, 29.....		December 1 – March 31

If you have questions regarding any of these regulations or the furbearer program in general, please feel free to contact your Regional Wildlife Biologist, or Wally Jakubas, Mammal Group Leader, at our Bangor Office (941-4471). Have a great trapping season!

Sincerely,

Chandler E. Woodcock
Commissioner

CHANDLER E. WOODCOCK
COMMISSIONER

September 24, 2014

Dear Trapper:

It has been six years since I have had the pleasure of writing this letter for the annual Trapper Information Booklet. We may all share the same thought that it would better if John DePue was writing this letter, but as you know, he left Maine to be closer to family in Michigan. There is no denying that John did a fine job as Maine's Furbearer Biologist and will be missed. I am hoping to be able to start advertising John's old position next week, and I hope to have a well-qualified furbearer biologist in place by late fall.

As most of you know, this booklet contains information on trapping season dates, beaver closures, and changes to trapping regulations, and more than a few reminders. The first reminder that I would like to call your attention to is our split trapping season for fisher. In the north (WMD's 1-11 and 14), the fisher season will follow the regular trapping season and will be open from November 2 to December 31st. In the south the season opens about two weeks later and closes about two weeks earlier (November 15 to December 15). The shorter season resulted in a low fisher harvest (618 animals statewide), especially in the south. It appears that far fewer trappers trapped in southern Maine than in years past, which may account, in part, for the low statewide fisher harvest. However, the number of fisher taken per fisher trapper was also very low. If you remember, when we passed the regulation for the split fisher season, we said that it would run a minimum of 5 years. We need this amount of time to accurately gauge the response of the fisher population to the split season.

Thank you to all the trappers that sent in their Trapper Effort Report forms last season. The more trappers that return their completed forms, the better the information we will have to manage furbearer populations. These reports give us an estimate of the amount of effort it took trappers to capture each furbearer species. Trapper effort information from these reports has already benefitted trappers in the ITP process by providing evidence that our current regulations for killer-type traps are working to keep lynx out of traps. We ask that you please take the time to look over the forms, on pages 2-5, before the trapping season starts so you have an idea of the information we are asking for. Then, return completed reports at the end of your trapping season. We encourage you to record your information as accurately as possible and greatly appreciate your participation in this effort.

Finally, please be diligent in your efforts to follow the rules and recommendations to reduce the chance of incidentally capturing a lynx (see page 6 for details). The willingness of trappers to report incidentally caught lynx and abide by regulations will go a long way towards ensuring trapping will continue in Maine for future generations.

Sincerely,

Wally Jakubas
Mammal Group Leader

FALL 2014 Trapper Harvest Report

Please return by **January 10, 2015** to: Wally Jakubas, Maine Department of Inland Fisheries & Wildlife, 650 State St., Bangor, ME 04401

Please fill in for each town (or WMD): **1)** the average number of traps set for each species you targeted.

2) The number of days you trapped for each species.

3) The number of each species you caught that you targeted.

4) The number of each species you caught incidentally. If you trapped with a partner, include **only** the information for the animals that **you** tagged.

~Thank you for your help improving furbearer management in Maine.~

2014 Trapping Regulations to Avoid Lynx Capture

Regulations

- **Foothold traps** in **WMDs 1-6 and 8-11** set on dry ground can NOT have an inside jaw spread greater than **5 $\frac{3}{8}$ inches** and must have at least one swivel.
 - **Cage-type live traps** in WMDs 1-6 and 8-11 with dimensions of 13 X 13 inches or greater are prohibited.
 - **Killer-type (Conibear) traps*** (with an inside jaw spread up to 8 inches) when set on land in **WMDs 1-11 and 14, 18 and 19** must be;
 - Set at least 4 feet above ground or snow level and 4 feet away from any bank. The pole or tree that the trap is affixed to must be:
 - 1) No greater than 4 inches wide at 4 feet above the ground and
 - 2) At an angle of 45° or greater to the ground the entire distance from the ground to the trap.
 - 3) The area within 4 feet of the trap in all directions must be
 - free of objects greater than 4 inches wide and
 - free of trees or poles slanted less than 45° between the ground & the height of the trap.
 - 4) If using a pole, the pole must be a natural section of tree which has not been planed or sawed to create a flat surface.
- *Some exceptions are made for killer-type traps used in blind sets & set under overhanging banks (see IFW law book).
- **Killer-type traps** (with a jaw spread ≤ 7.5 inches, ~ #220 or smaller) in **WMDs 7, 14, 18 and 19** can be set on the ground with a lynx exclusion device; see page 41 of IFW's law book for more information.

Reporting Requirements:

Trappers are required to report the capture of lynx to a Game Warden or Department biologist as soon as possible and prior to removing the animal from the trap, unless a Department official cannot be reached in time to prevent injury to the lynx. Any lynx released under this provision must be reported to the Department within 24 hours from the time it was discovered. **Report Lynx Captures to (207) 592-4734** (24 hours a day / 7 days a week). In remote areas, phones are available at NMW checkpoints, custom gates, sporting camps, and logging operations.

Bait Regulations:

- During the early canine and muskrat trapping seasons, it is illegal to set a trap using exposed bait or visual attractor.
- During the regular trapping season, traps cannot be set within 50 yards of bait that is visible from above.

IF YOU CATCH A LYNX OR EAGLE

Trappers catching either a lynx or eagle are required to notify the Department as soon as possible. If you accidentally trap a lynx or eagle during the trapping season, please notify a biologist or game warden immediately, before releasing the animal. **For quickest response, phone 207-941-4466 during regular office hours (8 AM - 5 PM Monday-Friday), or 207-592-4734 outside of business hours. You may also contact the nearest regional office at one of the numbers listed in the back of this booklet.**

Department personnel are available to help release lynx or eagles caught in traps.

Lynx and eagles are protected by federal and state laws, and cannot be kept if caught in a trap. An eagle caught in a trap will likely require rehabilitation. An eagle caught in a trap by one of its legs may show little if any signs of injury at the time of capture. What may appear to be a very minor bruise at the time of capture can quickly develop into a fatal injury. This is because of the unique way that blood circulates in an eagle's leg. A bruise may result in a loss of blood flow in the leg; this in turn can lead to an infection that causes the death of the bird. **Please contact MDIFW as soon as possible if you catch an eagle in a trap.** Ideally, an eagle should spend as little time in a trap as possible. Safely releasing an eagle from a trap will require covering the eyes or head of the animal, controlling the talons (e.g., tether the feet together), and putting the released eagle in a holding container that has adequate ventilation and that restricts wing movement (e.g., burlap bag). Once the eagle is secure it can be held for a biologist or warden or be transported to the nearest MDIFW regional office.

Remember that **IFW regulations require all incidentally trapped lynx be reported** to either a biologist or warden. In most circumstances a biologist will tranquilize, examine, and release the animal. However, there may be circumstances where it is impossible for a biologist to get to the trap site within a reasonable amount of time. In those incidences or when a lynx is in immediate danger from being left in a trap, trappers are permitted to release the lynx. However, the incidental capture of a lynx must be reported to a MDIFW warden or biologist within 24 hours. If you release a lynx, please note the extent of any injuries the lynx may have received in the trap. For information regarding how to safely release a lynx from a trap, please refer to information on the Department website (http://www.maine.gov/ifw/wildlife/management/lynx_avoid.htm) or to the booklet "How to Avoid the Incidental Take of Lynx While Trapping or Hunting Bobcats and other Furbearers" which was distributed to all trappers a couple of years ago. If you would like more information on lynx biology or the Department's lynx research efforts, please contact Jennifer Vashon or Wally Jakubas or at 941-4466.

If you catch a cat and are uncertain whether it is a bobcat or a lynx, please contact a wildlife biologist or warden before killing the animal. It is better to err on the side of caution than to accidentally kill a lynx.

Fisher Season Rule

- a. In WMDs 12, 13 and 15-29 the season is limited to Nov. 15th through December 15th. All fisher caught outside of the fisher season must be immediately released alive. If a fisher is found dead in the trap the animal must be submitted to a game warden or to an IFW regional office within 72 hours of taking the fisher. (The general season listed in section 2. above applies to all other WMDs.)
- b. The harvest of fisher will be limited to 10 fisher per trapper statewide.

How to Avoid Fisher in Marten Sets

Following these recommendations will decrease the chances of catching a fisher when targeting marten.

- Use killer-type traps with a jaw spread less than 5 inches.
- Set marten traps on poles with a smaller diameter, between 2-3 inches.
- Set marten traps on steeper leaning poles or vertical trees, 60°-90°.
- Use lynx exclusion device with the 4x4 inches opening to trap marten in WMDs the exclusion device is allowed (WMDs 7, 14, 18, & 19).
- Restrict opening to access trap to a 2x2 inches opening.

Lynx Exclusion Device Rule

In Wildlife Management Districts 7, 14, 18, and 19 killer-type traps with a jaw spread not to exceed 7 ½ inches may be used on the ground level if the trap is placed within a lynx exclusion device. The trap jaws must be completely within the device; the trap springs can be outside of the device. The lynx exclusion device must not have an opening greater than 6 inches by 8 inches, the set trap within the device must be a minimum of 18 inches from the closest edge of the opening to the trap (intended for 160 and 220 Conibear traps) or; if the device has a 4 inches by 4 inches or less opening, the trap must be a minimum of 12 inches from the closest edge of the opening to the trap (intended for 120 Conibear traps). The opening must be on the side or on top of the device, not directly in front of the trap. The back of the device must be secured to withstand heavy pulling; if using wire mesh with a wood box, the wire mesh must wrap around two opposite sides of the box and be secured. There must be at least 1 attachment point for each side of the device where a joint or panels come together. The exclusion device can be constructed of wood, or wire mesh that does not exceed 1½ by 1½ inches, or 1 inch by 2 inches openings, (side to side). The wire mesh has to be 16 gauge or less (wire diameter of 0.05 or greater). The opening slot in the exclusion device that allows the trap springs to extend outside the device can be no more than 7 ½ inches wide and a height of no more than 1½ inches. The trap must be anchored outside of the exclusion device. Bait must not be visible from above.

An example of a lynx exclusion device constructed according to regulations.

2014-2015 Beaver Trapping Season & Closures

WMD's	Season Dates
1, 2, 4, 5.....	October 19 – April 30
3, 6, 8, 9, 10, 11,.....	November 2 – April 30
18, 19, 28.....	November 2 – April 15
7, 12, 13, 14, 17, 27.....	November 2 – March 31
15, 16, 20, 21, 22, 23, 24, 25, 26, 29.....	December 1 – March 31

Closed areas for Wildlife Management District 1

(Open October 19 – April 30)

The following towns shall be completely **closed** with **no** part of the town **open**:

(No towns in this category in this District)

Mercer, except the land of David P. Van Burgel and Kathy J. Scott, which is located between the Hampshire Hill Road and the Rome Road, and includes a portion of Hilton Brook.

Closed areas for Wildlife Management District 17

(Open November 2 – March 31)

The following towns shall be completely **closed** with **no** part of the town **open**:

(No towns in this category in this District)

The following towns shall be **closed** but with the excepted part of the town **open**:

(No towns in this category in this District)

The following towns shall be **open** but with the excepted part of the town **closed**:

Atkinson, except the flowage located on the east side of the Dorr Road and within the Bud Leavitt Wildlife Management Area.

Charleston, except the land of R. Christopher Almy, which includes a portion of South Gate Brook and a tributary to Hudson Brook.

Hartland, except tributaries to Thompson Brook west and north of Rt. 23 that are on the property owned by John Studt.

Hermon, except the land of Herbert Bates bordered on the north by the Fuller Road, on the east by the New Boston Road, on the south by Rt. 2/100, and to the west by the Billings Road.

Skowhegan, except an un-named bog located on the land of Sally Knight, east of the East Ridge Road and south of the Notch Road. It is south of Loomis Hill, west of Whittemore Hill, and north of Foster Hill.

Closed areas for Wildlife Management District 18

(Open November 2 – April 15)

No closures within this Wildlife Management District

Closed areas for Wildlife Management District 19

(Open November 2 – April 15)

The following towns shall be completely **closed** with **no** part of the town **open**:

(No towns in this category in this District)

The following towns shall be **closed** but with the excepted part of the town **open**:

(No towns in this category in this District)

The following towns shall be **open** but with the excepted part of the town **closed**:

Princeton, except Slime Meadow Brook.

T3 ND, except Duck Lake Brook.

T4 ND, except Duck Lake Brook.

Closed areas for Wildlife Management District 20

(Open December 1 – March 31)

No closures within this Wildlife Management District

Closed areas for Wildlife Management District 21

(Open December 1 – March 31)

The following towns shall be completely **closed** with **no** part of the town **open**:

(No towns in this category in this District)

The following towns shall be **closed** but with the excepted part of the town **open**:

(No towns in this category in this District)

The following towns shall be **open** but with the excepted part of the town **closed**:

Pownal, except tributary to Chandler River, between Allen Road and Chadsey Road, and Chandler River between Poland Range Road and Lawrence Road.

Closed areas for Wildlife Management District 22

(Open December 1 – March 31)

The following towns shall be completely **closed** with **no** part of the town **open**:

Perkins Twp. **(Swan Island)**

The following towns shall be **closed** but with the excepted part of the town **open**:

(No towns in this category in this District)

The following towns shall be **open** but with the excepted part of the town **closed**:

Pittston, except the property owned by Judith Schuppien and Philip Brzozowski located on the west side of the Eastern River and south of the Caston Road.

Woolwich, except area encompassed by Walker Road to the south, the Mountain Road to the east, and the Old Stage Road to the north and west.

Closed areas for Wildlife Management District 23

(Open December 1 – March 31)

The following towns shall be completely **closed** with **no** part of the town **open**:

(No towns in this category in this District)

The following towns shall be **closed** but with the excepted part of the town **open**:

(No towns in this category in this District)

The following towns shall be **open** but with the excepted part of the town **closed**:

China, except the property of H.C. Dillenbeck very large flowage located on Clark Brook.
Town map 32 Lots 37 and 38.

Etna, except wetland located east of the Rt. 143, south of I-95, west of the Etna/Carmel town line, and north of the South Etna Road.

Freedom, except wetlands located east of the North Palermo Road, south of the Sibley Road, west of Bennett Lane, and north of Hutchins Corner.

Montville, except the parcel of land owned by the Sheepscot Wellspring Land Alliance located north of the Burnham Hill Road, west of the Howard Road, south of the Penny Road, and east of the Halldale Road.

Montville, except land owned by the Sheepscot Wellspring Land Alliance located north of the Burnham Hill Road between Herb Jackson Road and the Mountain Road.

Augusta, except north of Rt. 17, east of the Cony Road, south of Rt. 105, west of the Leavitt Road, intending to close that portion of Riggs Brook that is bounded by these roads.

Closed areas for Wildlife Management District 24

(Open December 1 – March 31)

The following towns shall be completely **closed** with **no** part of the town **open**:

(No towns in this category in this District)

The following towns shall be **closed** but with the excepted part of the town **open**:

(No towns in this category in this District)

The following towns shall be **open** but with the excepted part of the town **closed**:

Wells, except Webhannet River east of U.S. Route 1.

Closed areas for Wildlife Management District 25

(Open December 1 – March 31)

The following towns shall be completely **closed** with **no** part of the town **open**:

(No towns in this category in this District)

The following towns shall be **closed** but with the excepted part of the town **open**:

(No towns in this category in this District)

The following towns shall be **open** but with the excepted part of the town **closed**:

Alna, except north of Rt. 194 to the Alna Town Line, east of Hollywood Blvd, and west of the Egypt Road.

Boothbay, except Meadow Pond located southeast of the Back Narrows Road and north of Route 96.

Bristol, except unnamed tributary to the Pemaquid River that passes through the land owned by James Deucher, north of the Rock Schoolhouse Road. (Fire Road. B 31-1).

Bristol, except Johnson's Meadow on Trout Brook, so called, to the Chamberlain Post Office.

Edgecomb, except area south of Lawrence Road (formerly Mill Road.), east of Parson's Creek, and west of Parson's Point Road and Rt. 27.

Edgecomb, except the wetland known as Hourglass Pond located east of Rt. 26, north of the Middle Road, south of the Town Hall Road, and west of the CMP powerline right-of-way, property of Betty Twarog.

Edgecomb, except Charles & Constance Schmid Land Preserve, a private land preserve that encompasses 766 acres located off of the Middle Road, Old County Road and Mount Hunger Road East, and Mount Hunger Road North.

Hope, except the land east of the junction of Route 17 and Hope Street, north of the junction of Route 17 and Park Street to the Camden town line, south of the Rockport/Camden town line headed west to the Hope town line, south of the Hope town line to Hope Street, and east of Hope Street to the junction of Route 17.

Jefferson, except south of the Atkins Road, west of Rt. 215 to the town line, and west of the Egypt road to the Jefferson /Whitefield town line.

Northport, except the land of Ovid Santoro located east of State Route 52, north of the Northport/Lincolntown line, north of Pitcher Pond, west of the thread of Sucker Brook, and south of Pitcher Road.

Rockport, except the land east of the junction of Route 17 and Hope Street, north of the junction of Route 17 and Park Street to the Camden town line, south of the Rockport/Camden town line headed west to the Hope town line, south of the Hope town line to Hope Street, and east of Hope Street to the junction of Route 17.

South Thomaston, except the land of C. M. Waterman, so called Towers Brook, west and north of Route 73, and south of the Grierson Road.

Whitefield, except the land owned by Paul and Mary Fournier located north of the Jewett Road in the Jefferson-Whitefield Sanctuary.

Whitefield, except the land owned by Lisa Tuttle, including the beaver flowage located along the west side of Weary Pond Road, just inside the boundary of the Jefferson-Whitefield Sanctuary.

Whitefield, except east of the Weary Pond Road to the Jefferson/Whitefield Town line, east of Hollywood Blvd to the Jefferson/Whitefield Town Line, and south of the Hilton Road.

Note: Land in the Jefferson-Whitefield Sanctuary that is in the town of Whitefield will be open to beaver trapping except for the area described above.

Closed areas for Wildlife Management District 26 (Open December 1 – March 31)

The following towns shall be completely **closed** with **no** part of the town **open**:

(No towns in this category in this District)

The following towns shall be **closed** but with the excepted part of the town **open**:

(No towns in this category in this District)

The following towns shall be **open** but with the excepted part of the town **closed**:

Eddington, except Merrill Road Brook which crosses the Merrill Road in East Eddington.

Searsport, except flowage on the property of Richard and Joyce Stevens located south and east of the junction of the Mt. Ephraim road and the Nickels Road.

Stonington, except Ames Pond and its inlet.

Swanville, except flowage located on the northwest corner of Swan Lake on the property owned by Alfred Miliano.

Closed areas for Wildlife Management District 27 (Open November 2 – March 31)

No closures within this Wildlife Management District

Closed areas for Wildlife Management District 28 (Open November 2 – April 15)

No closures within this Wildlife Management District

Closed areas for Wildlife Management District 29

(Open December 1 – March 31)

The following towns shall be completely **closed** with **no** part of the town **open**:

(No towns in this category in this District)

The following towns shall be **closed** but with the excepted part of the town **open**:

(No towns in this category in this District)

The following towns shall be **open** but with the excepted part of the town **closed**:

Frenchboro, except Long Island.

AVOIDING INCIDENTAL CAPTURES

Bald Eagles

In past years, the single biggest factor leading to the incidental capture of bald eagles was the use of exposed bait. In 2007, MDIFW initiated a rule change to require trappers to cover exposed bait that is within 50 yards of a trap. Bait must be covered so that it is not visible from above and be covered in such a way that the covering will not easily be blown off in the wind. Bait that must be covered includes feathers or other animal parts used as attractants, such as might be used to trap bobcat. Eagles are attracted to a variety of carrion including large and small mammals. Examples of trap sets where exposed bait resulted in an incidental eagle capture are fisher and marten sets, float sets for muskrats where more than one trap is set on the float (if multiple traps are set, eagles may get caught in one of the remaining traps), pocket sets along stream banks, and traps set near carrion. Bald eagles are particularly attracted to sets where fish are used as bait. Do not depend on water hiding the bait. Several eagles have been caught in traps baited with fish when water levels dropped leaving the fish exposed.

Canada Lynx-

If you are trapping in WMDs 1 through 11, 14, 18, and 19, lynx could be in the area. If you are trapping for fox, coyote, or bobcat and see lynx sign near the vicinity of your traps, please consider moving your traps to another location.

Trappers in WMDs 1 through 11, 14, 18, and 19 required to set killing-type traps (Conibear) either

- 1) completely under water or**
- 2) at least 4 feet above the ground or snow level and 4 feet away from any bank.**

When setting a killer-type trap on land, the pole or tree that the trap is affixed to must be:

- 5) no greater than 4 inches wide at 4 feet above the ground**
- 6) at an angle of 45° or greater to the ground the entire distance from the ground to the trap.**
- 7) The area within 4 feet of the trap in all directions must be**
 - free of objects greater than 4 inches wide and**
 - free of trees or poles slanted less than 45° between the ground and the height of the trap.**
- 8) If using a pole, the pole must be a natural section of tree which has not been planned or sawed to create a flat surface.**

***Except, killer-type traps with an inside jaw spread of 5 inches or less may be used in blind sets with no bait, lure, or visible attractors.**

The purpose of this rule is to ensure there are no objects that make it easier for a lynx to access the trap. Some exceptions are made for blind sets and sets under overhanging banks. Please see p. 40 of the Trapping and Hunting 2013-2014 Laws and Rules booklet for details.

Further information on how to avoid the incidental capture of lynx is available on our website:

http://www.maine.gov/ifw/wildlife/management/lynx_avoid.htm

TRAPPING ON PRIVATE PROPERTY

The Inland Fisheries and Wildlife Landowner Relations Program is working towards enhancing the relationship between landowners and land users. With approximately 94% of the land in Maine in private ownership, everyone must respect all landowners and their rights as landowners. All landowner wishes have to be followed by all outdoor recreational participants to help ensure access and use of private property in the years to come.

Trappers are expected to abide by a higher standard of landowner permission than any of the other outdoor recreational participants. This standard is a law that requires written permission from the landowner before going on someone else's land to set traps, except for beaver.

Trappers as a whole have done a great job in abiding by this requirement. The end result has been a better understanding of trapping by the landowners and the public in general. Contacting the landowners for permission does put an extra burden on the trapper. However, the one-on-one communication between the trapper and landowner plays a vital role in improving landowner relations -- not only for trappers -- but for all outdoor recreational participants.

Although you are not required to get written permission before trapping beaver on land you do not own, you are not allowed to go on another person's land to trap beaver if the landowner has asked you not to go there, either verbally or by posted notice.

We receive several complaints each year where trappers have set up on a beaver colony that the landowner does not want removed. Please make every effort to avoid this type of conflict. You can do that by communicating with landowners prior to the opening of the trapping season as to what their wishes or concerns may be.

The law covering abuse of another's property contains several prohibited acts, but the one most likely to be encountered by a trapper is the cutting of trees or branches on the land of another. Cutting is not allowed without landowner permission.

We would like to thank all trappers for the excellent efforts they have displayed in helping us improve landowner relations. What you do does make a difference.

OTHER MATTERS OF ATTENTION

Nuisance Beaver

A list of nuisance beaver sites **may** be available for your area. Please contact your regional wildlife office if you are interested in the location of recent nuisance beaver removal sites or the location of any current nuisance sites. Regional wildlife offices are listed at the back of this booklet.

Temporary Marten and Fisher Tags

Please remember that a temporary tag must be signed, dated, and attached to captured marten or fisher at the time the animal is removed from the capture site. Fur tagging agents are to retain the temporary tag from each marten or fisher after they attach the permanent fur tag to the pelt.

Pelt Tagging Requirements

Trappers must have all their fall fur tagged 10 days after the season ends. The Department will be collecting the fur tagging books for fall fur 20 days after the close of the season (i.e., around January 20). The Department uses fur tagging information to monitor the population trends of furbearers. If fur remains untagged, the accuracy of our furbearer management systems is diminished. Collecting fur tagging books earlier in the year will allow sufficient time to determine furbearer population levels and to discuss these findings with trappers and regional biologists prior to formulating trapping regulations.

Collared and Ear-tagged Animals

If you catch a collared or ear-tagged animal in one of your traps, that is NOT a lynx, you may take the animal for fur. However, you will need to return the collar and tags, and we would appreciate knowing where you caught the animal. Please call the nearest regional MDIFW office to report the location of the catch to a wildlife biologist and arrange to return the radiocollar and tags.

IDENTIFYING RARE MAMMALS

Lynx vs. Bobcat Know the Difference

The most notable difference between a lynx and a bobcat is paw size. Lynx paws are about twice the size of bobcat paws. Lynx can also be distinguished from bobcats by the tip of their tail, which is completely black (bobcat tail tips are black on the upper side [dorsal side] and white underneath). Lynx have more prominent ear tufts, paler coloration, less spotting, and longer legs than a bobcat. Please know the difference between bobcat, lynx, and fisher tracks (Table 3, Figures 5 and 6).

If you trap a bobcat that looks like a cross between a lynx and a bobcat, we would like to know about it. We have recovered several lynx-bobcat hybrids in north central Maine and are

interesting in documenting other specimens. Remember, if you are uncertain whether you have trapped a lynx or a bobcat please call a biologist or warden before dispatching the animal. If you have already dispatched the animal, and think it has unusual characteristics for a bobcat, we are still interested in seeing it. We have documented lynx - bobcat hybrids in Maine.

New England Cottontail (*NEW*)

Please be aware that if you trap in Cumberland and York counties you may encounter New England cottontail. The New England cottontail is endangered in Maine. The New England cottontail is a small rabbit with relatively short ears. They are readily distinguished from snowshoe hare which have large hind feet, long ears, and a larger body. Snowshoe hare turn white in winter while a New England cottontail stays brown year-round. New England cottontail are usually associated with dense brushy habitat. If you wouldn't want to walk through a brushy area, it is probably good New England cottontail habitat. Please report any sightings of New England cottontail or incidental captures to Wally Jakubas 207-941-4471 or your regional biologist.

Wolves

Please let us know about any animals you encounter that are wolf-like in appearance.

Large coyotes (50 + pounds) are very rare. Any canid 50 pounds or greater may be a wolf, wolf-hybrid, or domestic dog (See Table 3, Figure 4). Maine law protects all wildlife from hunting or trapping when there is not a specific hunting or trapping season for the species. It is also illegal to indiscriminately shoot domestic dogs or wolf-hybrids. We have documented several wolves and wolf hybrids over the last 20 years. In most cases, we believe these animals were released from captivity. However, we also know that wild wolves have been trapped in southern Quebec and it would have been possible for these animals to travel into Maine. Wolves are considered a federally endangered animal in the Northeast and it is illegal to kill them.

Please use care in identifying any large canids you encounter. If you suspect you have a canine in a trap that is over 4.5 ft. in length (from tip of tale to nose) or over 50 pounds it may be a wolf. Please contact your regional biologist before dispatching the animal.

If you see tracks, hear howling, or find other sign that indicates that a wolf is nearby, please contact our Department. Wolves of the Laurentides Reserve of Quebec (the nearest established wolf population to Maine) range from 55 - 105 pounds. Wolves have proportionately longer legs, frame, and larger feet than coyotes. Compared to coyote tracks, wolf tracks are larger and rounder (Table 3, Figure 4). Wolf coloration ranges from black to very light beige. Many wolves are tan with grizzled black and gray - similar to Maine's coyotes.

TRACK AND TRACK PATTERNS FOR COUGAR, LYNX, AND WOLF; WITH COMPARISONS TO MORE COMMON SPECIES

Table 3. Distinguishing track characteristics

Species	General Shape	Walking Stride	Print Size (Front Foot)	Track Pattern
Bobcat	General round appearance. Heel points in slightly different direction than toes. No nail marks, but if present, attached to toe marks.	6" to 14"	Length - 1 $\frac{7}{8}$ " to 2 $\frac{1}{2}$ " Width - 1 $\frac{7}{8}$ " to 2 $\frac{5}{8}$ "	Direct or double register walking pattern. Trail pattern zigzags right-left-right-left.
Lynx	Same as bobcat but tracks show a lot more hair. Smaller pads than a mountain lion.	11" to 18"	Length - 3 $\frac{1}{4}$ " to 3 $\frac{3}{4}$ " Width - 3" to 3 $\frac{3}{8}$ " Outline of hair impression Length - 4 $\frac{1}{2}$ " to 5 $\frac{3}{8}$ " Width - 3 $\frac{3}{8}$ " to 5 $\frac{1}{2}$ "	Same as bobcat
Cougar	Same as bobcat	20" to 32"	Length - 3" to 4 $\frac{1}{4}$ " Width - 3 $\frac{1}{8}$ " to 3 $\frac{9}{16}$ "	Walking pattern similar to other cats. Deep snow may show belly and tail drag marks.
Coyote	4 toes, oval shaped track, Front nails often close together. Side nails often do not register.	Eastern: 17 $\frac{1}{2}$ " to 26"	Eastern: Length - 2 $\frac{7}{8}$ " to 3 $\frac{1}{2}$ " Width - 1 $\frac{7}{8}$ " - 2 $\frac{1}{2}$ "	Trail pattern usually is in a straight line. Walking pattern is usually direct registering
Dog	Similar to wolves and coyotes. Inner toes often splayed outwards.	Varies with breed	Varies with breed	Trail pattern sloppy, wandering, not usually in a straight line. Walking pattern is often double register.
Wolf	4 toes, symmetrical track, longer than wide, more rounded than a coyote, nail marks not attached to toe mark (same as coyote), 4 nails register.	Algonquin: 20 $\frac{1}{2}$ " to 28 $\frac{1}{2}$ "	Algonquin: Length - 4" - 4 $\frac{3}{4}$ " Width - 2 $\frac{1}{2}$ " - 3 $\frac{1}{4}$ " Other: Length - 3 $\frac{7}{8}$ " - 5 $\frac{1}{2}$ " Width - 2 $\frac{3}{8}$ " - 5"	Trail pattern usually is in a straight line. Walking pattern is usually direct registering.

Terminology:

Direct register - a walking pattern where the animal's forefoot is overprinted by the hind foot.

Double or Indirect register - a walking pattern where the animal's hind foot does not fall directly on the front track.

TRAPPING REGULATION CLARIFICATIONS

General Trapping

- No person shall stake, hook, fasten or position a trap at any trap site location in the fields, forests or waters of the State prior to the opening day of the trapping season.
- Steel foothold or killer-type traps must not be set within 50 yards of bait that is visible from above. Bait may be used for trapping if it is completely covered to prevent it from being seen from above, and it must be covered in such a way as to withstand wind action and other normal environmental conditions. Bait is defined as animal matter including meat, skin, bones, feathers, hair or any other solid substance that used to be part of an animal. This includes live or dead fish. For the purposes of this paragraph, bait does not include animal droppings (scat), urine or animals, dead or alive, held in a trap as the result of lawful trapping activity.
- No person shall stake, hook, fasten or position a trap at any trap site location in the fields, forests or waters of the State prior to the opening day of the trapping season.

Muskrat Trapping

- After the close of the Regular Trapping Season, muskrats may still be trapped, but only in those areas that are open to beaver trapping. After February 28, in those Wildlife Management Districts open to beaver trapping, muskrat trapping is restricted to 1) killer-type traps, foot-hold traps, and colony traps, which must be set to remain underwater at all times; or 2) foothold traps on “covered floats.” A covered float is defined as a float completely covered on the sides and top with hardware cloth, screen, or other similar material, having a mesh size no greater than 1/2 inch square. Access to the float will be limited to openings at the extreme ends of the float and the openings will not exceed 7 inches in height, or 14 inches in width. The use of exposed bait or visible attractor on covered floats is prohibited. Only one trap may be placed per float; the trap must be recessed 3 inches or greater from any opening in the cover; the trap chain or wire must be at least 3 feet long; and the maximum foothold trap size for covered floats sets will be No. 1 ½.

Beaver Trapping

- Traps set for beaver in October, November and April are restricted to killer-type traps, and drowning sets.
- No person shall use meat or fish as bait in trapping for beaver.
- No person shall make advanced preparation on the trapping grounds for the taking of beaver or muskrat previous to the open season on these animals.
- Except as provided herein, no person, except an agent of the Commissioner, shall place, set or tend any traps (i) within 10 feet of a beaver house, muskrat den or house, (ii) within 5 feet of a beaver dam, or (iii) within 4 feet of a beaver trap that has been set by another trapper. In Wildlife Management Districts 1, 2, 4, 8, 9, and 10 there is no required setback distance from an active beaver dam; In Wildlife Management Districts 1, 2, 3, 4, 5, and 6 there is no required setback distance from a beaver house.

Regulations and Definitions

1. **Beaver Dam** - The Department, for enforcement purposes, has modified its definition of a “beaver dam,” such that the term does not include the remains of an inactive or breached beaver dam that is in disrepair and is no longer being maintained by beaver. This provides a standard definition of what is considered a beaver dam for law enforcement purposes.
2. **Tributary** - means a brook, stream or river flowing directly or indirectly into a lake, pond or another brook, stream or river. A lake or great pond shall not be construed to mean tributary. The tributary to a great pond shall not be considered a tributary to the outlet of that great pond.
3. **Setback Distance** - Setback distance requirements specified in existing regulation shall apply to the trapping of all species at all times. You are required to set your traps at least 4 feet away from another person’s beaver traps; however, as a matter of common courtesy you should always set your traps a reasonable distance away from any trap which has been set by someone else.
4. **Beaver House** - The term beaver house shall be interpreted to include any cavity in the bank which is capped by beaver with mud and sticks. The above definition addresses the question of whether or not a bank den is considered to be a beaver house, as well as the question of what is considered to be a bank den. Holes in the bank not capped with mud and sticks shall not be considered beaver houses.
5. **Muskrat Den** - A muskrat den is any cavity, which is capped by muskrats with vegetative matter including but not limited to hollow stumps and bank cavities. Holes in the bank not capped with vegetative matter shall not be considered muskrat dens.
6. **Distance Measurements** - For dams, dens, and houses, all measurements should be made from the trap itself. Sticks and poles used to construct the set are not considered part of the trap. The setback distance shall be measured as follows:
 - House** - Measured from where the nearest edge of the house meets water or ice. In the case of capped cavity on the bank, distance will be measured from where the nearest intersection edge of the cap meets the ground, water, or ice.
 - Dens** - Measured from the nearest opening.
 - Dams** - Beaver dams should be measured from the where the nearest edge of the dam meets ground, water, or ice.
7. **Advanced Preparation on "Trapping Grounds"** - There shall be no installation or placement of trapping implements, associated materials, or supplies or preparation of the site IN the water or ON the ice including the associated flowage, marsh, bog, brook, stream, river, pond, or lake prior to the beginning of the trapping season on beaver and muskrat. For species other than muskrat or beaver, you are allowed to go out before the season and prepare the area you want to trap. However, you are never allowed to fasten a trap (set or unset) at any trap site location before opening day.
8. **Nuisance Beaver Removal** - Every effort shall be made to minimize the out-of-season removal of nuisance beaver by agents of the Commissioner. This shall be accomplished by: (1) maintaining in-season trapping opportunity in problem areas, and (2) restricting the removal of nuisance beaver by agents of the Commissioner prior to the beaver trapping season. Except in emergency situations, no nuisance beaver will be removed within 30 days

of the opening day of the beaver trapping season in that area. A list of locations where beaver have been removed within 30 days of the opening of the beaver trapping season will be maintained at regional offices. The above provisions will maintain a greater level of beaver trapping opportunity.

9. "Drowning Set" – A drowning set is a trap, including colony traps, killer-type traps, and foothold traps, that is set completely underwater and rigged in such a way as to reasonably ensure the drowning of any species of trapped furbearer that would reasonably be expected to visit the set location and be held in the type of trap used at the set. (**Note:** You are allowed to trap in shallow water where a trapped animal is **not** likely to drown, but traps set in this manner are not considered to be drowning sets and are **not** allowed within ½ mile of the built up section of a city or town.)

10. Trap Tending Laws - The trap tending laws are as follows:

All traps set in organized towns must be tended daily, except killer-type traps and under-ice drowning sets for muskrat and beaver. Each killer-type trap, except under-ice drowning sets, must be visited at least once every 3 calendar days.

All traps set in unorganized towns must be tended daily, except for killer-type traps, drowning sets, and under-ice drowning sets. Each killer-type trap or drowning set, except under-ice drowning sets, in unorganized towns must be tended at least once in every 5 calendar days.

This subsection does not apply to under-ice drowning sets for beaver and muskrat.

11. Under ice drowning sets - For enforcement and information purposes, all drowning sets for beaver and muskrat during January and February will be considered "under ice drowning sets" as far as trap tending requirements are concerned.

During November, December, March and April if a drowning set is under-ice there will be no tending requirement, if a trap is set in open water the trap tending requirements are; 3 days for killer-type traps and 1 day for all other traps in organized towns, and 5 days for killer-type traps and 5 days for drowning sets in unorganized towns.

Note: It is legal to use snares set completely under water for beaver during the open season on beaver.

Wildlife Management Districts

When you bring in your fur to be tagged, the information will be entered on a card similar to the one below. Please be sure to have your trapping license ready, and information on when and where the animal was trapped.

Circle type: T = Trapper, H = Hunter, O = Other, I = Importation		Seal Number (First tag number in increasing series)	Species	# Taken	Month Killed	Town Caught	County	Marten/ Fisher Tag #
